RESEARCH INTERESTS

Most recent interests have been in the area of chiral NMR shift reagents. Prior work has involved the development of lanthanide luminescence detection methods for liquid chromatography and development of selective adsorbents for use in pre-column simplification of samples for gas chromatographic analysis.

CURRICULAR/EDUCATIONAL INTERESTS

Began using collaborative group-learning methods and project-based lab experiences in my upper-level and general chemistry courses in the early 1990s. Subsequent efforts involved the development of active learning materials for the analytical chemistry curriculum that are available for free under the Creative Commons Copyright through the Active Learning site of the Analytical Sciences Digital Library (www.asdlib.org). Recent efforts involved a national community transformation project aimed at promoting the use of active learning in the classroom and laboratory by instructors of analytical chemistry courses. Over 150 faculty members participated over the course of the project.
